# Maintenance And Safety

## Plug and Receptacle System

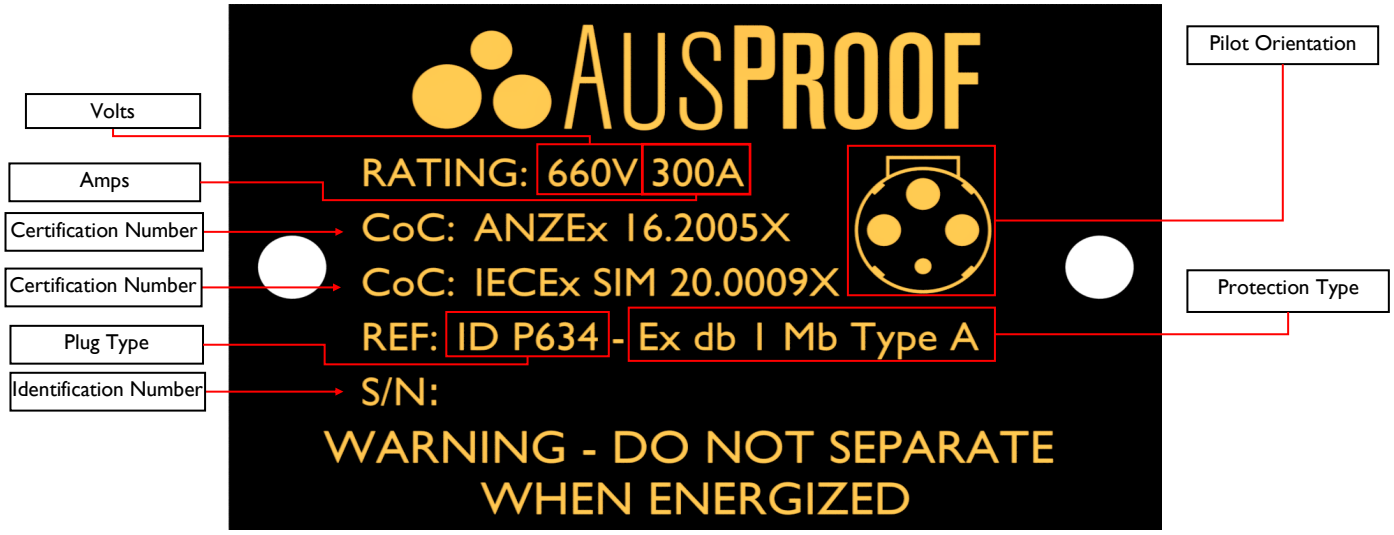

To ensure the safe operation of the plug and receptacles, personnel should be aware of minimal ongoing care and maintenance.

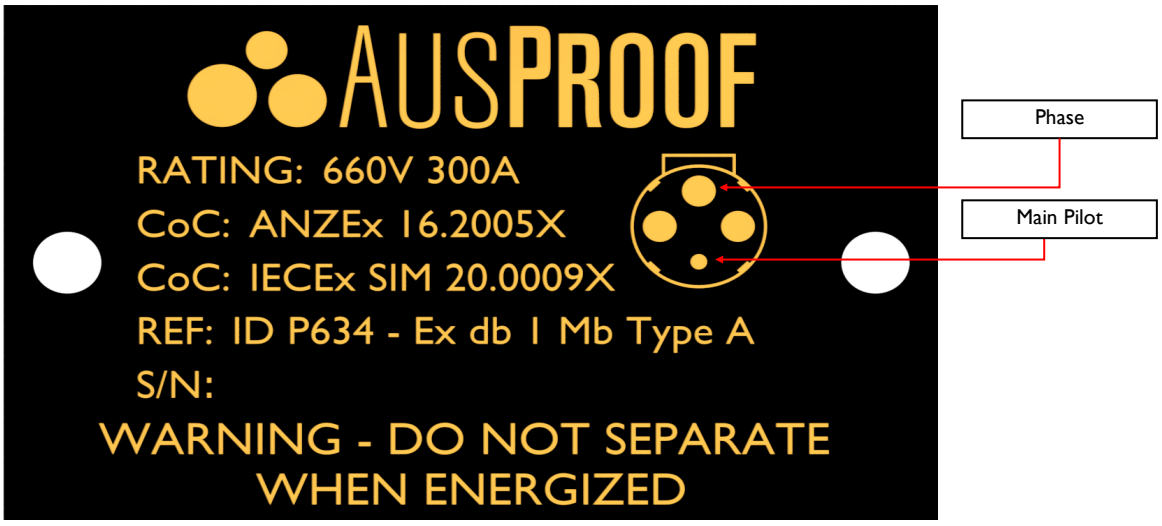

- When cables are not in use, ensure that protective covers have been fitted to provide adequate sealing against moisture and dust.
- The plugs and receptacles should never be used as a towing or anchor point.
- Inspect plug and receptacle to ensure no parts are missing, if parts are missing it is deemed unsafe for use.
- Inspect insertion end of plug and entry of receptacle to ensure there is no damage, as damage could compromise the flame path protection.
- Before connection inspect sealing ring in receptacle to ensure they are located correctly into groove.
- Before connection of plug and receptacle ensure connecting pins are not bent from previous misuse or incorrect assembly.
- Ensure plug has been inserted fully into receptacle before energizing.
- If witness marks are used, make sure they are brightly painted on the sheath, located where the cable enters the gland. This needs to be routinely inspected to check if a gap appears between the end of the gland and the witness mark. A gap may indicate that the cable has been under tension and that the termination in the coupler may have moved.
- The maximum surface temperature the plug will achieve when operating at full rated current at an ambient of 40 Deg Celsius will not exceed 85 Deg Celsius, which is therefore suitable for safe use in underground mines as it is less than 150 Deg Celsius.

For 300/425A Plug Product

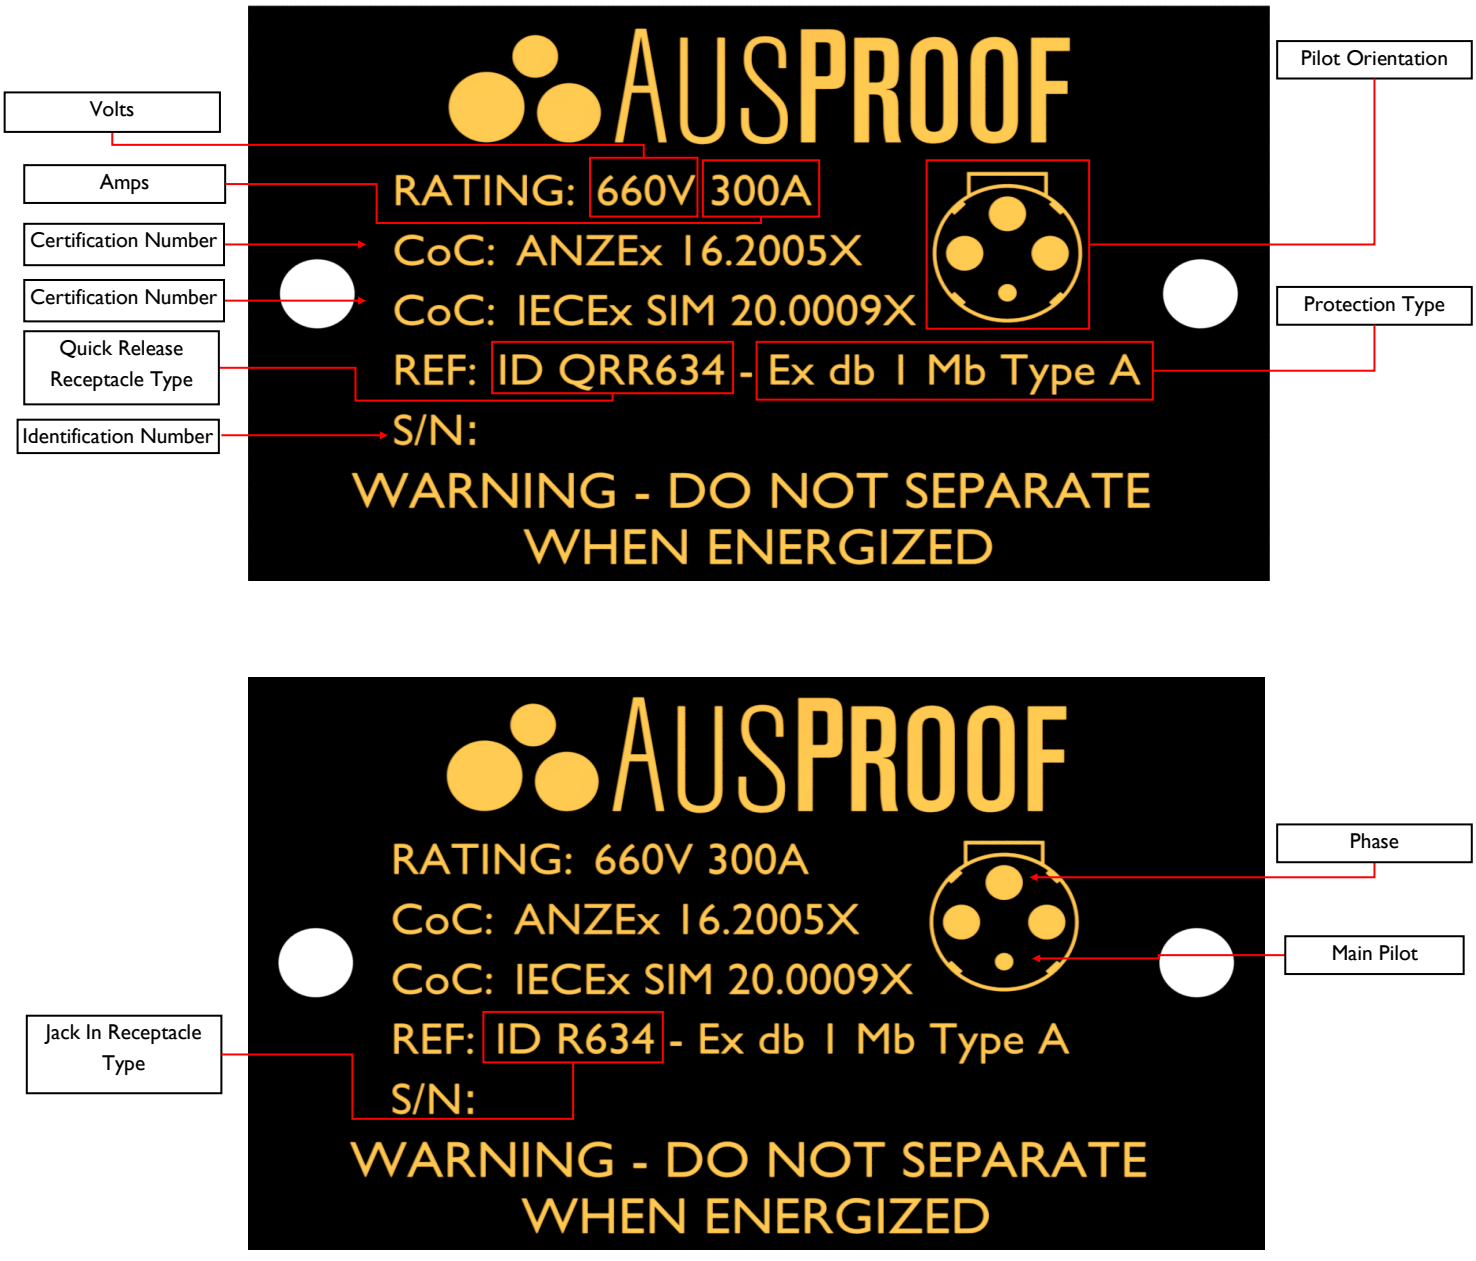

**Notes**

- Ensure Receptacle is Earthed to Ensure Induced Voltages Are Not Developed
- Plug and Receptacle Are Not To Be Separated When Energised

Standards Applied: AS/NZS 1299:2009, AS/NZS 60079.0:2019, AS/NZS 60079.1:2015

- In accordance with clause 9.2 of IEC 60079-0:2017, the following fasteners shall only be replaced with identical ones:
  - Nyloc nuts to ISO 7040 used to retain the jack in receptacle pawl screw.
  - Socket countersunk head screws to ISO 10642 used to fasten the pawl to the quick release receptacle rack.
  - Socket countersunk head screws to ISO 10642 used to retain the quick release receptacle pinion gear in the housing.

- In accordance with clause 11.3 of IEC 60079-1:2014, the following fastener property class shall apply:
  - Fixing gland bracket to receptacle: property class ≥ 4.6
  - Fixing compression clamp: property class ≥ 12.9
  - Fixing receptacle to Ex d enclosure: property class ≥ 4.6*
  - Retaining jack in receptacle pawl screw: ≥ Class 8
  - Fixing pawl to quick release receptacle rack: property class ≥ 12.9

**Note: Specified fastener property class to also be greater than or equal to the fastener property class specified for the Ex enclosure.*

- Flameproof Joints Are Not Intended to Be Repaired: For Further Specifications On Flamepath Joints Contact The Original Manufacturer For Information On The Dimensions Of The Flameproof Joints.
